FAX: 0257-24-3705

Kashiwazaki Technical High School (KTH) was founded as the second technical school in Niigata and it turned into the present technical high school by enforcement of the new school system in Showa 23. KTH has the history and tradition with a foundation of 77 years. The number of the graduates is more than 14,000 and the graduates have been actively involved in the country. Especially, they have a key role in supporting the industry of Kashiwazaki. This is the property and pride of KTH

KTH newly established “disaster prevention engineer course” was added in Heisei 21 and joins the existing five courses: “mechanical technology course,” “electronic-machine course,” “electrical energy course,” “information technology course,” and “environmental chemistry course.” In the “disaster prevention engineer course,” established by the trigger of Chuetsu-oki Earthquake (July, Heisei 19), we aim at fostering the human resources required

by society in a disaster such as to secure power sources and communication.

About the students’ success, the athletic clubs, for example track and field, baseball, handball, water polo, swimming, basketball, soccer, badminton, etc., have been practicing hard every day and have been doing well at various meetings. Also, taking advantage of attending a specialized high school, the students have taken part in manufacturing meetings, various robot competitions, and energy saving car competitions, etc., and got good results. In addition, they study hard for acquisition of qualification, for example to be a certified skilled worker, an electrical engineer, and a hazardous material engineer, etc.
